

Second Opinion/Path-to-Closure Evaluations

- Is your remediation taking longer than what was originally estimated?
- Are you at a point to start remediation and want to get a second opinion before you invest capital and time?
- Do you feel like there is something wrong with your remediation effort but you cannot seem to pinpoint the problem?
- Are you having unsatisfactory results with your confirmation sampling and/or groundwater rebound concentrations?

Let our experienced remediation hydrogeologists and engineers help you. We can easily sift through the assessment, characterization, O&M and GW monitoring data; and pull out the essential information for remedial optimization and site closure. We will identify data gaps and prepare a report summarizing current site conditions, with recommendations for future action to obtain a site closure. We developed an innovative method using an Excel spreadsheet and scientific protocols to provide our clients a condensed third party evaluation of their site. If currently applied remedy is not effective for the site, we will recommend alternative technologies used with or without retaining the current remedy.

We perform these services on a fixed fee basis for qualified sites.

- Underground fuel storage tank and dry cleaner sites : Call for pricing
- Industrial facilities, bulk fuel terminals, refineries: Call for pricing

A retainer may be required prior to start from new clients. The client needs to provide all available data/documents listed for the site, specifically, all boring logs and assessment data, groundwater sampling reports, O&M data and reports.

DELIVERABLES: The client will have a condensed report (up to five pages) and an MS Excel matrix that summarizes current site conditions, effectiveness of existing remediation system, data gaps, recommendations for improvement of the current remediation effort, recommendation for the alternative technologies, and a path to closure. The report will present all findings and recommendations in an easy to follow bulleted format.

We will be happy to be retained at a special rate to follow up on our recommendations and to perform periodic performance evaluations until a successful case closure is negotiated.

Please contact us at your earliest convenience to schedule a Path-to-Closure evaluation for your site.

Bays Environmental Remediation Management is a California State Certified Very Small Business (VSB). We are a California licensed general (A) and hazardous material removal (HAZ) and water well drilling (C57) contractor. Our professionals have required professional registrations (PG, CHG, PE, QSD, QSP) and a minimum of 20 years of experience in assessing and remediating hydrocarbons, solvents and metals. Our professionals have successfully applied numerous remediation methods including, SVE, TPE, DPE, MPE, chemical oxidation, bioremediation, in-well stripping, and bioventing, most resulting in site closures. Our principal hydrogeologist, Mehmet Pehlivan, invented a two-phase extraction method and obtained a patent in 1999. He also implemented innovative remediation solutions at various sites improving effectiveness of remediation alternatives. He has presented many workshops, papers and posters on two-phase extraction and in-well stripping with other leading scientists in local, regional and international conferences.
